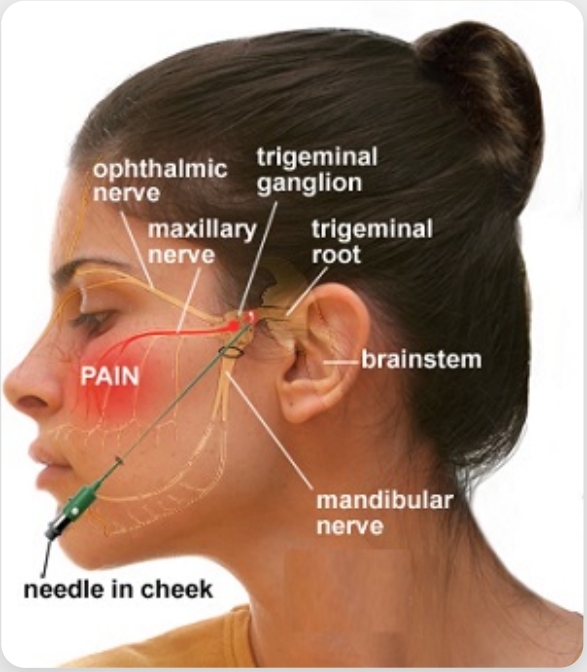
Book Appointment

What is Trigeminal Neuralgia?

Trigeminal Neuralgia is a chronic pain condition that affects the trigeminal nerve, responsible for carrying sensation from your face to your brain. Even mild stimulation of your face — such as brushing your teeth or applying makeup — can trigger intense, electric shock-like pain.



Treatment Options

Treatment for Trigeminal Neuralgia depends on the severity and frequency of your pain. Options may include:

- Medications to reduce or block the pain signals
- Microvascular decompression surgery
- Gamma Knife radiosurgery (non-invasive)
- Nerve blocks and injections
- Lifestyle modifications and physiotherapy support
